HARIBABU HASINI

nadellahasini@gmail.com | 8106764574 | Portfolio | LinkedIn | GitHub

PROFILE

Recent B.Tech graduate with hands-on experience in Python, SQL, backend development, data processing, and AI-assisted applications. Built practical projects involving ETL pipelines, REST APIs, MySQL databases, data analytics, and LLM-based solutions. Strong foundation in OOP, DBMS, Data Structures & Algorithms, and problem-solving, with experience using Git and working with real-world datasets. Interested in building reliable software solutions and applying Python and AI skills to real-world engineering problems.

EDUCATION

BTech, *Amrita Vishwa Vidyapeetham* Kerala, India | 10/2022 – 07/2026
Electronics and Communication Engineering

SKILLS

Programming & Analysis: Python, SQL
Database: MySQL, DBMS, SQL Query Optimization
Software Development: OOP, Data Structures & Algorithms, REST APIs, Git, GitHub
Data & AI: ETL Pipelines, Data Cleaning, Data Analytics, LLM Applications, Prompt Engineering
Tools & Technologies: Pandas, Tableau, DuckDB

PROJECTS

Conversational BI Agent for monday.com , *Personal Project* 2026

- Built a conversational AI agent (Python, Streamlit) enabling executives to query live monday.com boards in natural language and receive verified, board-ready financial figures.
- Engineered a deterministic data-profiling layer that ingests raw GraphQL data into an in-memory DuckDB store, infers semantic column types, and computes conditional null rates — grounding the LLM in real data constraints before any query runs.
- Built a multi-step tool-calling loop (via OpenRouter, with LLM fallback orchestration) that lets the agent propose reporting plans, generate and execute complex SQL, and self-recover from syntax errors.
- Implemented data-quality-aware prompting that forces the LLM to generate dynamic caveats tied to underlying data gaps (e.g., flagging when an aggregate relies on a column that's 60% null).
- Hardened the architecture with a strict, read-only API gateway that structurally blocks unauthorized GraphQL mutations, ensuring safe querying of production data.

Social Media ETL Pipeline , *Personal Project* 2025
Python, SQL, MySQL

- Built an end-to-end ETL pipeline in Python to extract, clean, transform, and load 500 social media posts (via public API) into a MySQL database for structured analytics.
- Modularized the pipeline into separate extract, transform, and load scripts, improving maintainability and making it easier to debug and onboard new data sources.
- Classified posts into 3 sentiment categories, finding the dataset was 91.2% Neutral and 8.8% Negative, with no missing or duplicate values after cleaning.
- Wrote 15+ SQL queries — including sentiment and engagement breakdowns — finding that Negative-sentiment posts had ~5% higher average engagement than Neutral posts, and that medium-length posts outperformed both short and long posts.

CERTIFICATES

AI Fundamentals: Foundations for Understanding AI — IBM: Gained foundational knowledge of AI concepts, machine learning, generative AI, AI applications, and responsible AI, with an understanding of how AI is applied to real-world problems.

Deloitte Australia – Data Analytics Job Simulation (Forage): Analyzed a business dataset and delivered a client-ready summary of key findings.

SQL (Advanced) — HackerRank: Certified proficiency in advanced SQL including complex joins, window functions, subqueries, and query optimization.

COMMUNITY OUTREACH PROJECTS

Mental Health Awareness, *Karunagapally* 2024
Delivered interactive mental health awareness sessions for 10th grade students at NSS HSS Karuvatta, in collaboration with subject experts.
